Context

Notes

- Topsoil in this corner exceeds level of rest of ground – a fair bit needs to be removed
- There are probably extensive roots in this area to be cut out in order to give sufficient depth for hardcore base
- 400mm Gravel surround is to enable leaving existing growth to fence / trellis. Intention is that this should be free to ground below (membrane covered) to allow later planting if needed). Soil must be left accessible ie no concrete bleed into the 400mm border
- Stones should be laid 45 degrees to wall / fence
- Run off should probably be to corner, into gravel
- Not made decision re stones yet!
